

PATAGONIAN MAGMATISM SYMPOSIUM

The geological community is invited to participate in the PATAGONIAN MAGMATISM SYMPOSIUM during the XXI Argentine Geological Congress in Puerto Madryn, Chubut.

The aim of this symposium is to generate discussion and update the community on research linked to magmatic evolution of Patagonian region. Patagonia records Paleozoic to Quaternary magmatism documenting geodynamic processes which drove Gondwanan and Andean tectonic evolution. The extensive record of variable petrogenetic processes in this region makes it a world-class laboratory for multidisciplinary studies of continental magmatism.

Deadline: February 15/2020

The symposium aims to have multidisciplinary contributions linked to Patagonian magmatism, such as:

- **Petrology**
- **Geochemistry**
- **Volcanism**
- **Geophysics**
- **Geodynamics**
- **Metallogeny**
- **Experimental petrology**
- **Geochronology**

Coordinators: Dr. César Navarrete; Dra. Gabriela Massaferrero; Dra. Claudia Zaffarana;
Dra. Carmen Martínez Dopico; Dr. Pablo Rossel; Dr. Mauricio González Guillot
